Mobile Application Development LAB

EXPERIMENTS

1.LAB-1: Develop an application for login page with username and password, setting parent activity	3
2.LAB-2 Develop a native calculator application	5
3.LAB-3: Implicit intents	9
4.LAB-4 Implement an application that creates an alert and toast upon receiving a message?	14
5. LAB-5 Droid Cafe Input	16
6.LAB-6.1 Services and BroadCast Receivers	28
7. LAB-7 DatePicker and TimePicker	35
8. LAB-8 Notifications & Sending Email	40
9.LAB-9 SQLITE / Database	44
10. LAB-10 Working with Firebase	50
Add Firebase using the Firebase console	50

1.LAB-1:Develop an application for login page with username and password, setting parent activity

Steps:

1. Open android studio File-->New-->New Project-->choose Empty Activity
2. Give project name(MyLogin) and configure your project
3. Name, PackageName, Save Location Language (Java)
4. Enter the package name
5. Choose the Minimum API Level click **Finish**
6. Go to res folder and select layout. Double click the **activity_main.xml** file
7. Now you can see the Graphics layout window.
8. Click the **activity_main.xml** file and type the code below
9. **Note:** keep the default code and change necessary code only

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <EditText
        android:id="@+id/name"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_marginTop="195dp"
        android:layout_marginEnd="83dp"
        android:layout_marginRight="83dp"
        android:ems="10"
        android:inputType="textPersonName"
        android:textColor="@color/colorAccent"
        android:hint="Enter Name"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
```

Mobile Application Development L

```

<EditText
    android:id="@+id/password"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_marginTop="15dp"
    android:ems="10"
    android:hint="Enter Password"
    android:inputType="textPassword"
    android:textColor="@color/colorAccent"
    app:layout_constraintStart_toStartOf="@+id/name"
app:layout_constraintTop_toBottomOf="@+id/name" />
    <Button
        android:id="@+id/login"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_marginTop="24sp"
        android:layout_marginBottom="407dp"
        android:text="Login"
        android:onClick="userLogin"
        app:layout_constraintBottom_toBottomOf="parent"
app:layout_constraintEnd_toEndOf="parent"
app:layout_constraintStart_toStartOf="parent" app:layout_constraintTop_toBottomOf="@+id/password"
app:layout_constraintHorizontal_bias="0.467"
        app:layout_constraintVertical_bias="0.111" />

</androidx.constraintlayout.widget.ConstraintLayout>

```

1. Go to project explorer and select java \ MainActivity.java (keep the default code and change accordingly) and type the following code

```
package com.bhuvan.mylogin;
```

```

import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
import android.widget.Toast;

```

```

public class MainActivity extends AppCompatActivity {
    EditText name,pass;

    @Override
    protected void onCreate(Bundle savedInstanceState) {

```

```

super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);
name=findViewById(R.id.name);
pass=findViewById(R.id.password);
}
public void userLogin(View view) {
String userName=name.getText().toString();
String password=pass.getText().toString();
Toast.makeText(this, "Logged in Successfully", Toast.LENGTH_SHORT).show();
if(userName.equals("bhuvan") && password.equals("bhuvan")){
Toast.makeText(this, "Logged in Successfully", Toast.LENGTH_SHORT).show();
Intent SecondIntent= new Intent(this,second.class);
startActivity(SecondIntent);
}else{
Toast.makeText(this, "Enter user name and password correctly", Toast.LENGTH_SHORT).show();
}
}
}

```

3. Now create second.java class with activity_second

steps: right-click on java folderàNewàActivityàEmpty Activity

give Activity Name as second check generate the layout, layout name activity_second click finish

add TextView element in activity_second.xml with **android:text="Welcome To Login Page"**

4. keep default code in second.java file

5. RUN the application and supply username and password you will get Welcome page

7. Add following code in AndroidManifest.xml file

To move to parent activity (i.e MainActivity.java)

```

<activity android:name=".second"
    android:parentActivityName=".MainActivity"
>

```

2.LAB-2 Develop a native calculator application

Steps:

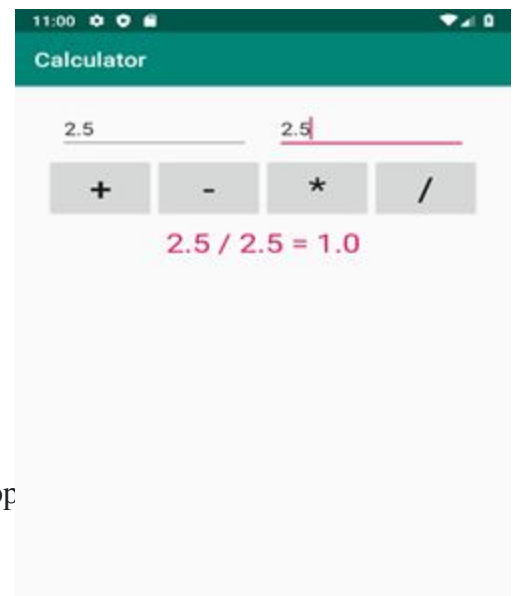

1) Open android studio File-->New-->New Project-->choose Empty Activity

2) Give a project name(Calculator) and configure your project

3) Name, PackageName, Save Location Language (Java)

4) Enter the package name

5) Choose the Minimum API Level click **Finish**

Mobile Application Development LAB

Department of Computer Science and Engineering

Develop

- 6) Go to res folder and select layout. Double click the **activity_main.xml** file
- 7) Now you can see the Graphics layout window.
- 8) Click the **activity_main.xml** file and type the code below

Note: keep the default code and change necessary code only

```
<?xml version="1.0" encoding="utf-8"?>

    //form the output line
    tvResult.setText(num1 + " " + oper + " " + num2 + " = " + result);
}
}

```

3.LAB-3: Implicit intents

In this LAB ImplicitIntents app demonstrates the use of implicit intents for starting activities. It contains three buttons for sending implicit intents:

Open a URL in a browser.

Find a location on a map.

Share a text string

Steps:

- 1) Open android studio File-->New-->New Project-->choose Empty Activity
- 2) Give a project name(Implicit intents)and configure your project
- 3) Name, PackageName, Save Location Language (Java)
- 4) Enter the package name
- 5) Choose the Minimum API Level click **Finish**
- 6) Go to res folder and select layout. Double click the **activity_main.xml** file
- 7) Now you can see the Graphics layout window.
- 8) Click the **activity_main.xml** file and type the code below

Note: keep the default code and change necessary code only

`<?xml version="1.0" encoding="utf-8"?>`

`<LinearLayout`

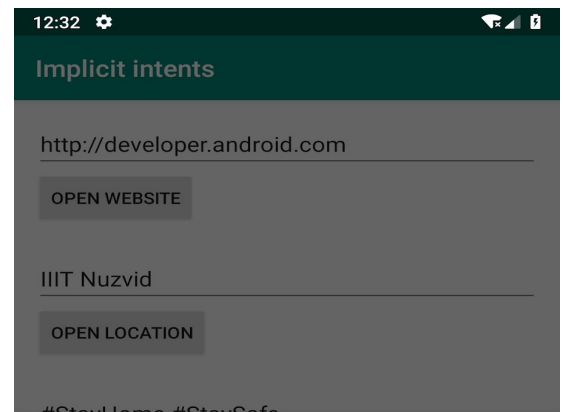

```
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent"
android:orientation="vertical"
android:padding="16dp"
tools:context=".MainActivity">
```

`<EditText`

```
android:id="@+id/website_edittext"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:text="@string/edittext_uri"/>
```

`<Button`

```
android:id="@+id/open_website_button"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout_marginBottom="24dp"
android:text="@string/button_uri"
android:onClick="openWebsite"/>
```

Share this text with:

Bluetooth

Copy to clipboard

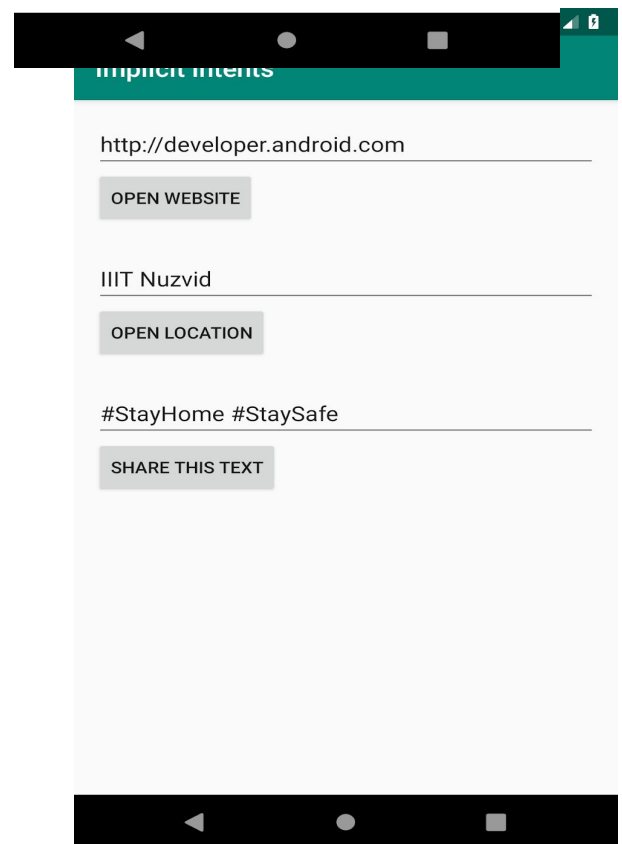

Gmail

Messages

Save to Drive

```

4.LAB-4 Implement an application that creates an alert and toast upon receiving a message?

Steps:

- 1) Open android studio File-->New-->New Project-->choose Empty Activity
- 2) Give a project name(MyAlert) and configure your project
- 3) Name, PackageName, Save Location Language (Java)
- 4) Enter the package name
- 5) Choose the Minimum API Level click **Finish**
- 6) Go to res folder and select layout. Double click the **activity_main.xml** file
- 7) Now you can see the Graphics layout window.
- 8) Click the **activity_main.xml** file and type the code below

Note: keep the default code and change necessary code only

```
<?xml version="1.0" encoding="utf-8"?>
```

```
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Alert"
        android:onClick="dialogAlert"
        android:textColor="@color/colorAccent"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintLeft_toLeftOf="parent"

        app:layout_constraintRight_toRightOf="parent"
```

```
        app:layout_constraintTop_toTopOf="parent" />
</androidx.constraintlayout.widget.ConstraintLayout>
```

In **MainActivity.java**

```
package com.bhuvan.myalert;
```

```
import androidx.appcompat.app.AlertDialog;
import androidx.appcompat.app.AppCompatActivity;
import android.content.DialogInterface;
import android.os.Bundle;
import android.view.View;
import android.widget.Toast;
public class MainActivity extends AppCompatActivity {
```

```
    @Override
```

```
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }
```

```
    public void dialogAlert(View view) {
        // create myalert object from Builder class
        AlertDialog.Builder myalert = new AlertDialog.Builder(MainActivity.this);
        // setting title name
        myalert.setTitle("Alert");
        // setting message
        myalert.setMessage("Okay to continue, Cancel to Stop");
        // in setPositiveButton positive button_name and OnClickListener
        myalert.setPositiveButton("Okay", new DialogInterface.OnClickListener() {
```

```
            @Override
```

```
            public void onClick(DialogInterface dialog, int which) {
                Toast.makeText(MainActivity.this, "Clicked okay",
                    Toast.LENGTH_SHORT).show();
            }
        });
```

```
        myalert.setNegativeButton("cancel", new DialogInterface.OnClickListener() {
```

```
            @Override
```

```
            public void onClick(DialogInterface dialog, int which) {
                Toast.makeText(MainActivity.this, "clicked on Cancel", Toast.LENGTH_SHORT).show();
            }
        });
```

```
        // show alert
```

```
        myalert.show(); } }
```

5. LAB-5 Droid Cafe Input

This app demonstrates images used as buttons and a floating action button to use an intent to launch a second activity. The app lets a user tap an image to make a choice. The app displays a Toast message showing the user's choice.

Steps:

- 1) Open android studio File-->New-->New Project-->choose **Basic Activity**
- 2) Give a project name(Droid Cafe Input) and configure your project
- 3) Name, PackageName, Save Location Language (Java)
- 4) Enter the package name
- 5) Choose the Minimum API Level click **Finish**
- 6) Go to the res folder and select layout. Double click the **content_main.xml** file
- 7) Now you can see the Graphics layout window.
- 8) Click the **content_main.xml** file and type the code below

Note: keep the default code and change necessary code only

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"

6.LAB-6.1 Services and BroadCast Receivers

Services

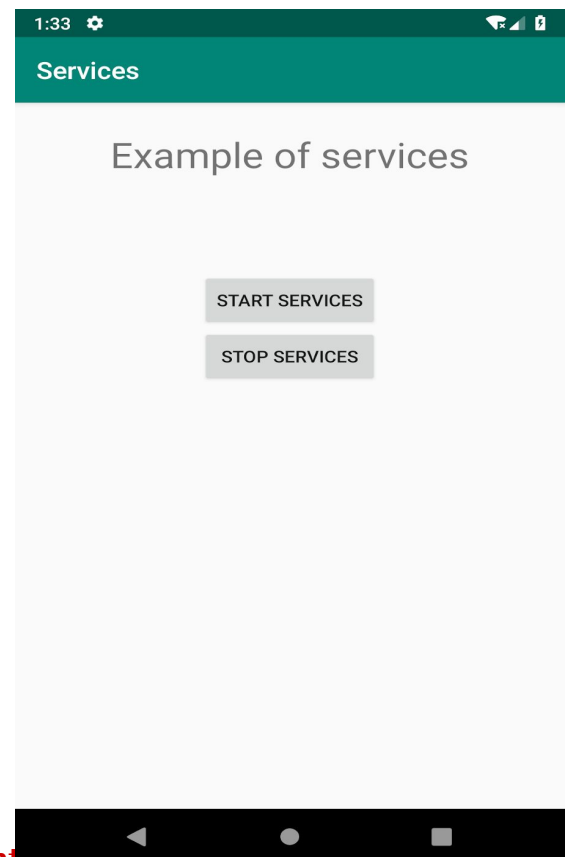

- 1) Open android studio File-->New-->New Project-->choose Empty Activity
- 2) Give a project name(Services)and configure your project
- 3) Name, PackageName, Save Location Language (Java)
- 4) Enter the package name
- 5) Choose the Minimum API Level click **Finish**
- 6) Go to res folder and select layout. Double click the **activity_main.xml** file
- 7) Now you can see the Graphics layout window.
- 8) Click the **activity_main.xml** file and type the code below

Note: keep the default code and change necessary code only

```
<RelativeLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools" android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:paddingLeft="24dp"
    android:paddingRight="24dp"
    android:paddingTop="24dp"
    android:paddingBottom="24dp" tools:context=".MainActivity">

```

In MyService.java

Creating MyService class

File-->New-->service-->service

```
package com.bhuvan.services;
```

```
import android.app.Service;
```

```
import android.content.Intent;
```

```
import android.os.IBinder;
```

```
import android.widget.Toast;
```

```
// step 1: create MyService class and extends to Service class
```

```
// step 2: implements the methods onStartCommand() and onDestroy()
```

```
public class MyService extends Service {
```

```
    public MyService() {  
    }  
}
```

```
@Override
```

```
public IBinder onBind(Intent intent) {
```

```
    // TODO: Return the communication channel to the service.
```

```
    //throw new UnsupportedOperationException("Not yet implemented");
```

```
    return null;
```

```
}
```

```
@Override
```

```
public int onStartCommand(Intent intent, int flags, int startId) {
```

```
    // Let it continue running until it is stopped.
```

```
    Toast.makeText(this, "Service Started", Toast.LENGTH_LONG).show();
```

```
    return START_STICKY;
```

```
}
```

```
@Override
```

```
public void onDestroy() {
```

```
    super.onDestroy();
```

```
    Toast.makeText(this, "Service Destroyed", Toast.LENGTH_LONG).show();
```

```
}
```

```
}
```

6.2 BroadcastPowerReceiver

In `activity_main.xml`

Add Button

```
<Button
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Send Custom Broadcast"
    android:onClick="sendCustomBroadcast"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintLeft_toLeftOf="parent"
    app:layout_constraintRight_toRightOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
```

In `MainActivity.java`

```
package com.bhuvan.broadcastpowerreceiver;
import androidx.appcompat.app.AppCompatActivity;
import androidx.localbroadcastmanager.content.LocalBroadcastManager;
import android.content.Intent;
import android.content.IntentFilter;
import android.os.Bundle;
import android.view.View;

import com.MyReceiver;
public class MainActivity extends AppCompatActivity {
    private MyReceiver myReceiver = new MyReceiver();
    private static String ACTION_CUSTOM_BROADCAST=
        BuildConfig.APPLICATION_ID+".CUSTOM_MESSAGE_BROADCAST";
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        IntentFilter intentFilter = new IntentFilter();
        intentFilter.addAction(Intent.ACTION_POWER_CONNECTED);
        intentFilter.addAction(Intent.ACTION_POWER_DISCONNECTED);
        this.registerReceiver(myReceiver,intentFilter);
        LocalBroadcastManager.getInstance(this)
            .registerReceiver(myReceiver,
                new IntentFilter(ACTION_CUSTOM_BROADCAST));
    }
    @Override
    protected void onDestroy() {
```

```

    this.unregisterReceiver(myReceiver);
    LocalBroadcastManager.getInstance(this)
        .unregisterReceiver(myReceiver);
    super.onDestroy();
}
public void sendCustomBroadcast(View view) {
    Intent cBIntent = new Intent(ACTION_CUSTOM_BROADCAST);
    LocalBroadcastManager.getInstance(this).sendBroadcast(cBIntent);
}
}

```

Creating MyReceiver class

File-->New-->other-->BroadcastReceiver

In MyReceiver.java

```

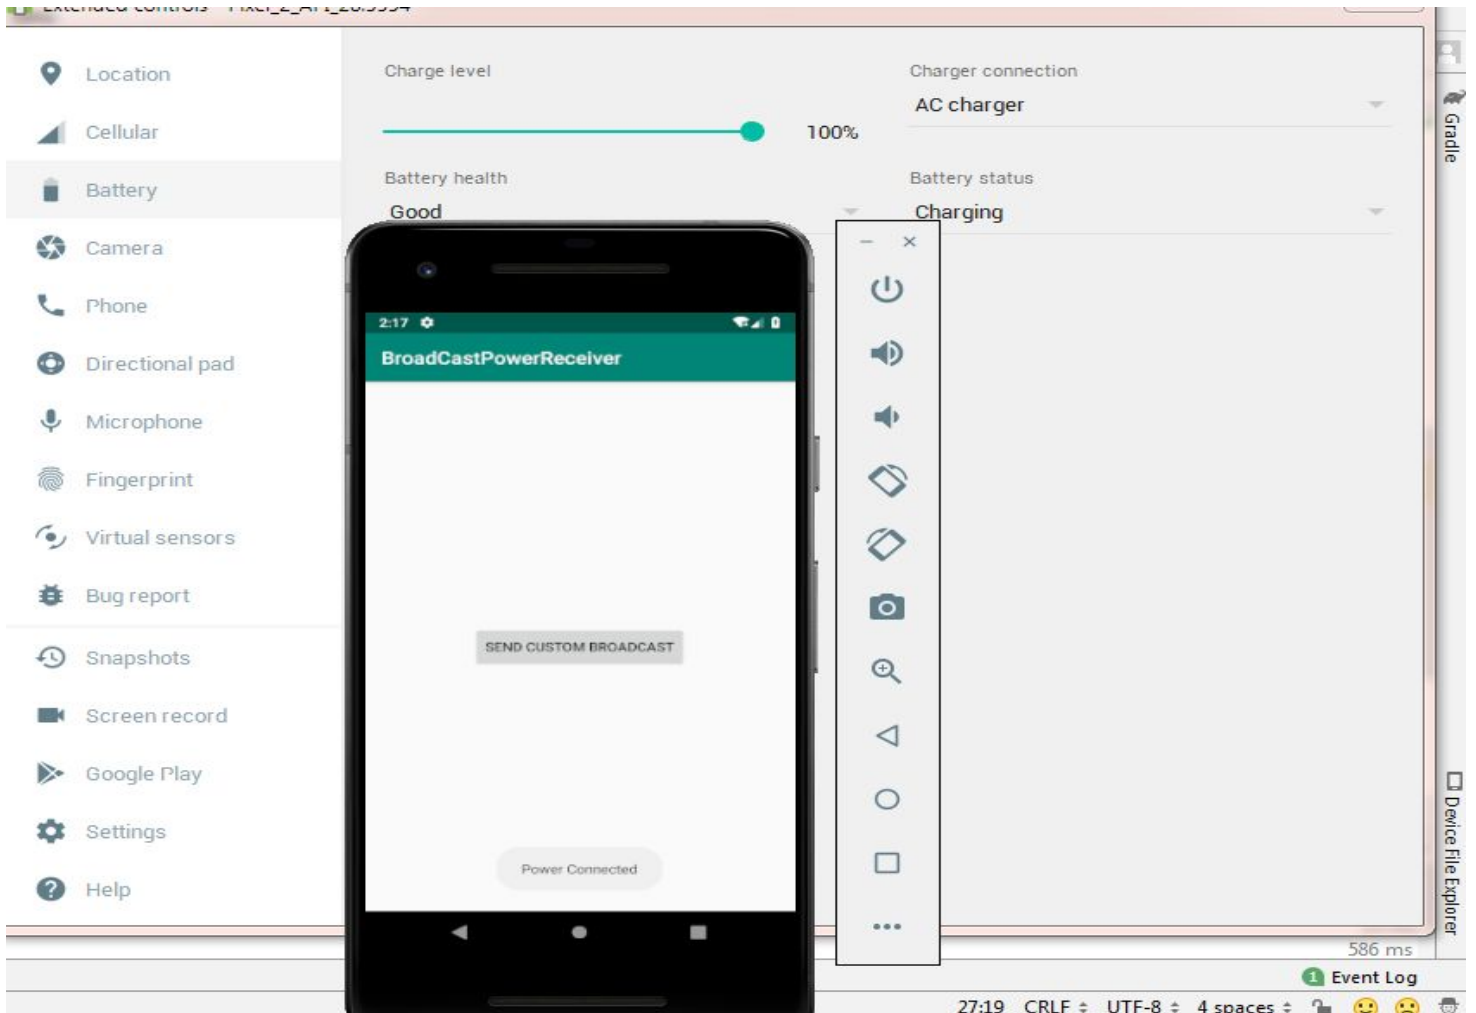

package com;
import android.content.BroadcastReceiver;
import android.content.Context;
import android.content.Intent;
import android.widget.Toast;

import com.bhuvan.broadcastpowerreceiver.BuildConfig;
// Step 1: create MyReceiver class and extends it to BroadcastReceiver
public class MyReceiver extends BroadcastReceiver {
    private static final String ACTION_CUSTOM_BROADCAST=
        BuildConfig.APPLICATION_ID+".CUSTOM_MESSAGE_BROADCAST";
    @Override
    public void onReceive(Context context, Intent intent) {
        String action=intent.getAction();
        String message;
        if(action!=null){
            message="Unwanted Connection";
            switch (action){
                case Intent.ACTION_POWER_CONNECTED:
                    message="Power Connected";
                    break;
                case Intent.ACTION_POWER_DISCONNECTED:
                    message="Power DISCONNECTED";
                    break;
                case ACTION_CUSTOM_BROADCAST:
                    message="ACTION_CUSTOM_BROADCAST RECEIVED";
                    break;
            }
            Toast.makeText(context,message,Toast.LENGTH_LONG).show();
        }
    }
}

```

}
}

Output Screens

7. LAB-7 DatePicker and TimePicker

This lab explains about DatePicker and TimePicker

In activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
```

```
<LinearLayout
```

```
xmlns:android="http://schemas.android.com/apk/res/android"
```

```
xmlns:app="http://schemas.android.com/apk/res-auto"
```

```
xmlns:tools="http://schemas.android.com/tools"
```

```
android:layout_width="match_parent"
```

```
android:layout_height="match_parent"
```

```
android:orientation="vertical"
```

```
android:background="#F7F7F8"
```

```
android:padding="10dp"
```

```
android:layout_gravity="center"
```

```
tools:context=".MainActivity">
```

```
<EditText
```

```
android:id="@+id/ed_date"
```

```
android:hint="Choose Date"
```

```
android:onClick="chooseDate"
```

```
android:inputType="date"
```

```
style="@style/inputStyle"
```

```
/>
```

```
<EditText
```

```
android:id="@+id/ed_time"
```

```
android:hint="Choose Time"
```

```
android:onClick="chooseTime"
```

```
android:inputType="time"
```

```
style="@style/inputStyle"
```

```
/>
```

```
<TextView
```

```
android:id="@+id/time"
```

```
android:text="0:0"
```

```
style="@style/tv" />
```

```
<TextView
```

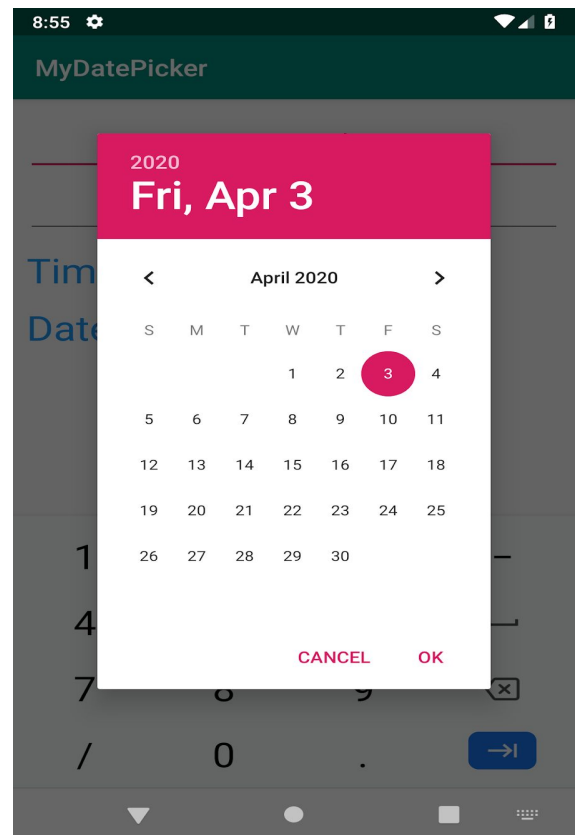

```
android:id="@+id/date"
```

```
style="@style/tv"
```

```
android:text="0:0"
```

```
/>
```

```
</LinearLayout>
```

In MainActivity.java

```
package com.bhuvan.mydatepicker;
```

```
import androidx.appcompat.app.AppCompatActivity;  
import androidx.fragment.app.DialogFragment;
```

```
import android.app.DatePickerDialog;

</style>

<style name="tv">
    <item name="android:layout_width">match_parent</item>
    <item name="android:layout_height">wrap_content</item>
    <item name="android:layout_marginTop">10dp</item>

```

```

        <item name="android:textSize">30dp</item>
        <item name="android:textColor">#2196F3</item>
    </style>

</resources>

```

8. LAB-8 Notifications & Sending Email

Step1: add **Notify Me!** Button in activity_main.xml

```

<Button
    android:id="@+id/notify"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Notify Me!"
/>

```

Step2: in MainActivity

```

package com.bhuvan.notifyme;
import androidx.appcompat.app.AppCompatActivity;
import androidx.core.app.NotificationCompat;

import android.app.NotificationChannel;
import android.app.NotificationManager;
import android.app.PendingIntent;
import android.content.Intent;
import android.graphics.Color;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
public class MainActivity extends AppCompatActivity {
    private Button button_notify;

    private static final String PRIMARY_CHANNEL_ID =
"primary_notification_channel";
    private NotificationManager mNotifyManager;
    private static final int NOTIFICATION_ID = 0;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        button_notify=findViewById(R.id.notify);

```

```

    button_notify.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View v) {
            sendNotification();
        }
    });
    createNotificationChannel();
}

public void sendNotification() {

    NotificationCompat.Builder notifyBuilder =
        getNotificationBuilder();
    mNotifyManager.notify(NOTIFICATION_ID,
        notifyBuilder.build());

}

public void createNotificationChannel()
{
    mNotifyManager = (NotificationManager)
        getSystemService(NOTIFICATION_SERVICE);
    if (android.os.Build.VERSION.SDK_INT >=
        android.os.Build.VERSION_CODES.O) {
        // Create a NotificationChannel
        NotificationChannel notificationChannel =
            new NotificationChannel(PRIMARY_CHANNEL_ID,
                "My Notification",
                NotificationManager.IMPORTANCE_HIGH);
        notificationChannel.enableLights(true);
        notificationChannel.setLightColor(Color.RED);
        notificationChannel.enableVibration(true);
        notificationChannel.setDescription("Notification from MyAPP");
        mNotifyManager.createNotificationChannel(notificationChannel);
    }
}

private NotificationCompat.Builder getNotificationBuilder(){
    Intent notificationIntent = new Intent(this, MainActivity.class);
    PendingIntent notificationPendingIntent =
        PendingIntent.getActivity(this, NOTIFICATION_ID, notificationIntent,
            PendingIntent.FLAG_UPDATE_CURRENT);
    NotificationCompat.Builder notifyBuilder =
        new NotificationCompat.Builder(this, PRIMARY_CHANNEL_ID)
            .setContentTitle("You've been notified!")
            .setContentText("This is your notification text.")
            .setSmallIcon(R.drawable.rgukt_logo)

```

```

        .setContentIntent(notificationPendingIntent)
        .setAutoCancel(true);

    return notifyBuilder;
}
}

```

8.2 Sending Email

Step1:

Take LinearLayout and add TextView and Button in activity_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:orientation="vertical"
    tools:context=".MainActivity">

    <TextView
        android:id="@+id/textView1"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Sending Mail Example"
        android:layout_alignParentTop="true"
        android:layout_centerHorizontal="true"
        android:textSize="30dp" />

    <Button
        android:id="@+id/sendEmail"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:onClick="sendEmail"
        android:text="Compose Email"/>

</LinearLayout>

```

</LinearLayout>

Step 2: Add internet permissions in AndroidManifest.xml

```

<uses-permission android:name="android.permission.INTERNET"/>

```

Step3: in MainActivity.java

```

package com.bhuvan.myemail;

```

```

import androidx.appcompat.app.AppCompatActivity;

```

```

import android.content.Intent;
import android.net.Uri;
import android.os.Bundle;
import android.util.Log;
import android.view.View;
package com.bhuvan.myemail;

import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.net.Uri;
import android.os.Bundle;
import android.util.Log;
import android.view.View;
import android.widget.Toast;

import java.util.EnumMap;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }
    public void sendEmail(View view) {
        /*Log.i("Send email", "");
        take necessary inputs from user interface
        this is only sampleCODE, you have to implement in your own
        and then write lab on record*/
        String[] TO = {"n16@rguktn.ac.in"};
        String[] CC = {"bhuvan@rguktn.ac.in"};
        Intent emailIntent = new Intent(Intent.ACTION_SEND);
        emailIntent.setDataAndType(Uri.parse("mailto:"), "text/plain");
        emailIntent.putExtra(Intent.EXTRA_EMAIL, TO);
        emailIntent.putExtra(Intent.EXTRA_CC, CC);
        emailIntent.putExtra(Intent.EXTRA_SUBJECT, "Course Registraion");
        emailIntent.putExtra(Intent.EXTRA_TEXT, "Dear Students, " +
            "click here to register for MAD course");
        try{
            startActivity(Intent.createChooser(emailIntent,
                "choose via..."));
            finish();
            Log.i("Finished sending..", "");
        }catch (android.content.ActivityNotFoundException ex)

```

```

    {
        Toast.makeText(MainActivity.this,
            "There is no email client installed.",
            Toast.LENGTH_SHORT).show();
    }
}
}

```

9.LAB-9 SQLITE / Database

In activity_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
<AbsoluteLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"

10. LAB-10 Working with Firebase

Add Firebase using the Firebase console

Adding Firebase to your app involves tasks both in the [Firebase console](#) and in your open Android project (for example, you download Firebase config files from the console, then move them into your Android project).

Step 1: Create a Firebase project

Before you can add Firebase to your Android app, you need to create a Firebase project to connect to your Android app. Visit [Understand Firebase Projects](#) to learn more about Firebase projects.

Create a Firebase project

Step 2: Register your app with Firebase

After you have a Firebase project, you can add your Android app to it.

Visit [Understand Firebase Projects](#) to learn more about best practices and considerations for adding apps to a Firebase project, including how to handle multiple build variants.

1. Go to the [Firebase console](#).

2. In the center of the project overview page, click the **Android** icon (plat_android) to launch the setup workflow.
If you've already added an app to your Firebase project, click **Add app** to display the platform options.
3. Enter your app's package name in the **Android package name** field.
4. What's a package name, and where do you find it?
5. **Make sure that you enter the package name that your app is actually using. You cannot add or modify this value after you register your app with your Firebase project.**
6. (Optional) Enter other app information: **App nickname** and **Debug signing certificate SHA-1**.
7. How are the *App nickname* and the *Debug signing certificate SHA-1* used within Firebase?
8. Click **Register app**.

Step 3: Add a Firebase configuration file

1. Add the Firebase Android configuration file to your app:
 1. Click **Download google-services.json** to obtain your Firebase Android config file (google-services.json).
 2. Move your config file into the module (app-level) directory of your app.
2. What do you need to know about this config file?
3. To enable Firebase products in your app, add the [google-services plugin](#) to your Gradle files.
 1. In your root-level (project-level) Gradle file (build.gradle), add rules to include the Google Services Gradle plugin. Check that you have Google's Maven repository, as well.
 2. buildscript {
 - 3.
 4. repositories {
 // Check that you have the following line (if not, add it):
 google() // Google's Maven repository
}

```

dependencies {
    // ...

    // Add the following line:
    classpath 'com.google.gms:google-services:4.3.3' // Google Services plugin
}

allprojects {
    // ...

    repositories {
        // Check that you have the following line (if not, add it):
        google() // Google's Maven repository
        // ...
    }
}

```

5. In your module (app-level) Gradle file (usually `app/build.gradle`), apply the Google Services Gradle plugin:
6. apply plugin: `'com.android.application'`
7. **// Add the following line:**
8. **apply plugin: `'com.google.gms.google-services'` // Google Services plugin**

```

android {
    // ...
}

```

Step 4: Add Firebase SDKs to your app

1. To your module (app-level) Gradle file (usually `app/build.gradle`), add the dependencies for the [Firebase products](#) that you want to use in your app.

2. Analytics enabled

3. Analytics not enabled

4. dependencies {

5. // ...

6.

7. // Add the Firebase SDK for Google Analytics

implementation 'com.google.firebase:firebase-analytics:17.3.0'

// Add the dependencies for any other Firebase products you want to use in your app

// For example, to also use Firebase Authentication

implementation 'com.google.firebase:firebase-auth:19.3.0'

// Getting a "Could not find" error? Make sure that you've added

// Google's Maven repository to your root-level build.gradle file

}

8. Sync your app to ensure that all dependencies have the necessary versions.

9. If you added Analytics, run your app to send verification to Firebase that you've successfully integrated Firebase. Otherwise, you can skip the verification step.

Your device logs will display the Firebase verification that initialization is complete. If you ran your app on an emulator that has network access, the [Firebase console](#) notifies you that your app connection is complete.

Firebase Realtime Database

Store and sync data with our NoSQL cloud database. Data is synced across all clients in realtime, and remains available when your app goes offline.

The Firebase Realtime Database is a cloud-hosted database. Data is stored as JSON and synchronized in realtime to every connected client. When you build cross-platform apps with our iOS, Android, and JavaScript SDKs, all of your clients share one Realtime Database instance and automatically receive updates with the newest data.

Write to your database

// Write a message to the database

FirebaseDatabase database = FirebaseDatabase.getInstance();

DatabaseReference myRef = database.getReference("message");

myRef.setValue("Hello, World!");

// below lines are in our project

databaseReference = FirebaseDatabase.getInstance().getReference();

```
//databaseReference.child(user.getId()).setValue(userInformation);
```

In the project

In activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
